

DAY 12

NAME: Nandhini V

DATE: 24-07-2025

Tasks:

1. Write a python program which defines a function to find maximum of 3 numbers. Read the numbers as input and pass as argument to the function.
2. Write a python program to read string as input and check whether it is a palindrome.
3. Write a Java program which performs file copy.
4. Write a python program to find the number of lines, words and characters in a file.

Answers:

1. Code:

```
def find_max(a, b, c):  
    return max(a, b, c)  
  
n1 = int(input("Enter first number: "))  
n2 = int(input("Enter second number: "))  
n3 = int(input("Enter third number: "))  
  
maxi = find_max(n1, n2, n3)  
print("The maximum number is:", maxi)
```

Output:

```
PS D:\python> python maxofnum.py  
Enter first number: 20  
Enter second number: 55  
Enter third number: 12  
The maximum number is: 55
```

2. Code:

```
def is_palindrome(s):  
    return s == s[::-1]  
  
text = input("Enter a string: ")  
  
if is_palindrome(text):  
    print("The string is a palindrome.")  
else:  
    print("The string is not a palindrome.")
```

Output:

```
PS D:\python> python palindrome.py  
Enter a string: oops  
The string is not a palindrome.
```

```
PS D:\python> python palindrome.py  
Enter a string: madam  
The string is a palindrome.
```

3. Code:

```
package org.learning1;  
  
import java.io.FileInputStream;  
import java.io.FileOutputStream;  
import java.io.IOException;  
  
public class FileCopy {  
    public static void main(String[] args) {  
  
        try {  
            FileInputStream fis = new FileInputStream("D:/java/Task/src/org/learning1/source.txt");  
            FileOutputStream fos = new FileOutputStream("destination.txt");  
  
            int byteRead;  
            while ((byteRead = fis.read()) != -1) {  
                fos.write(byteRead);  
            }  
        }  
    }  
}
```

```
        fis.close();
        fos.close();

        System.out.println("File copied successfully!");
    } catch (IOException e) {
        System.out.println("An error occurred during file copy: " + e.getMessage());
    }
}
}
```

Output:

source.txt

The screenshot shows an IDE window with three tabs: 'source.txt', 'FileCopy.java', and 'destination.txt'. The 'source.txt' tab is active, displaying the text 'Hello, world!' on line 1. Line 2 is empty and highlighted in blue.

File copied successfully!

destination.txt

The screenshot shows an IDE window with three tabs: 'source.txt', 'FileCopy.java', and 'destination.txt'. The 'destination.txt' tab is active, displaying the text 'Hello, world!' on line 1. Line 2 is empty and highlighted in blue.

4. Code:

```
def count_file_stats(filename):
    try:
        with open(filename, 'r') as file:
            lines = file.readlines()

            line_count = len(lines)
            word_count = sum(len(line.split()) for line in lines)
            char_count = sum(len(line) for line in lines)

            print(f"Lines: {line_count}")
            print(f"Words: {word_count}")
            print(f"Characters: {char_count}")

    except FileNotFoundError:
        print("File not found. Please check the filename or path.")

filename = input("Enter the filename: ")
count_file_stats(filename)
```

Output:

```
sample.txt
1 Welcome to python learning!!
```

```
PS D:\python> python filecount.py
Enter the filename: sample.txt
Lines: 1
Words: 4
Characters: 28
```

```
file1.txt
1 Python is simple, flexible and portable language.
```

```
PS D:\python> python filecount.py
Enter the filename: file1.txt
Lines: 1
Words: 7
Characters: 49
```
