

DAY 3

NAME: Nandhini V

DATE: 06-08-2025

Task:

create two tables in sql .

1. Conference room table with conf room name, seating capacity.

2. tree table with tree names and it's details

Then join them and fetch the values via linq and print the results in console. You can use linqpad

Code:

Table creation and value insertion:

use stores;

create table conference(Room_Name varchar(15) primary key, no_of_seats int);

create table tree(Id int primary key, Tree_Name varchar(15), Description varchar(30), foreign key (Tree_Name) references conference(Room_Name));

```
INSERT INTO conference (Room_Name, no_of_seats) VALUES
('Oak', 50),
('Coconut', 100),
('Maple', 75),
('Neem', 120),
('Banyan', 200);
```

```
INSERT INTO tree (Id, Tree_Name, Description) VALUES
(1, 'Oak', 'Large shady tree'),
(2, 'Coconut', 'Tropical palm tree'),
(3, 'Maple', 'Fruit-bearing tree'),
(4, 'Neem', 'Medicinal tree'),
(5, 'Banyan', 'Sacred tree with aerial roots'),
(6, 'Maple', 'Tree known for its sweet sap'),
(7, 'Banyan', 'Tree symbolizing shelter');
```

Linq Query:

```
from con in Conferences
join ts in Trees
  on con.RoomName equals ts.TreeName
select new { ts.Id, con.RoomName, ts.Description, con.NoOfSeats }
```

Output:

EntityQueryable<> (7 items) ...			
Id	RoomName	Description	NoOfSeats
5	Banyan	Sacred tree with aerial roots	200
7	Banyan	Tree symbolizing shelter	200
2	Coconut	Tropical palm tree	100
3	Maple	Fruit-bearing tree	75
6	Maple	Tree known for its sweet sap	75
4	Neem	Medicinal tree	120
1	Oak	Large shady tree	50
			820
